## TEXTMODULE

### Program overview

Short description What is the focus of the degree program?

Please keep in mind that some degree program names are not self-explanatory and that prospective students may not have an immediate understanding of the study content covered. The text should be catchy and easily understandable for prospective students. Avoid using technical terms wherever possible or use explanations or alternative wording.

For continuing education master's programs:

- You must mention that the program is a continuing education program (e.g. *The continuing education master's program in Science Marketing is...or similar.*)
- If the degree program is fee-based, this must also be included: *This is a fee-based degree program meaning tuition fees are charged. Further information about the current fees is available on the program's website.*

Approximately 800-850 characters total

### Admission Requirements

*Like every other bachelor's degree program at TU Berlin, applicants must possess a university entrance qualification certificate to apply to the XXX program. Generally, the Abitur serves as the university entrance qualification certificate. You can, however, also study at TU Berlin without a university entrance qualification certificate if you can demonstrate certain professional qualifications.*

*The master's program in XXX (XXX = study subject if applicable/required) requires applicants to possess a first university degree qualifying them for professional work.  
(If applicable, include required number of credit points)*

*The bachelor's/master's program is taught in German/English. For German/English: If you are applying with a foreign school-leaving certificate, you must provide proof of German/English skills at a specific level (provide required level if applicable). This is a prerequisite for admission.*

*Knowledge of English is useful as some courses/modules in the compulsory elective component are offered in English. However, this is not a condition for admission to studies.*

### Program structure

*The XXX program consists of XXX different phases/primary components: fundamentals and advanced topics (1st-5th semesters) and a specialization (6th-8th semesters).*

*The first phase of the program focuses on teaching the necessary basic technical and methodological skills (1st-3rd semesters), which are then applied in study projects. Additionally, students will develop their XXX skills and learn how to XXX (e.g. work in teams, undertake interdisciplinary work). A professional internship offers students the opportunity to gather initial professional experience and gain a better understanding of their skills and interests. During the second phase, you choose a specialization to pursue. (Please amend, change, supplement here, depending on the requirements of the study program)*

*Or: The master's program is divided into compulsory, compulsory elective, and elective components. The compulsory component encompasses XX credit points including projects and teaches basic and advanced topics and skills. You are further required to complete XX credits in compulsory elective modules and XX credits in elective modules. Besides these modules, you must also complete a professional internship for xx credit points to complete the master's thesis (xx credit points).*

*The objectives and structure of the program as well as the examination requirements and details on how the examinations are carried out are set down in the study and examination regulations.*

*There is a proposed course schedule for the degree program. This is a recommendation for how to complete the degree program within the standard period of study of X semesters. You can find it as an annex to the study and examination regulations. The most current version of the regulations applies to applicants.*

**Study and examination regulations** (link to most recent StuPo is automatically generated)

### Content & modules

*The bachelor's degree program in xxx is modular in design. A module combines curriculum content relating to a certain topic. Modules often include a variety of different study and teaching formats such as lectures, practical tutorials, seminars, and practical projects. Students are required to earn a specific number of credit points and complete certain coursework and assessments in each module. (Please amend accordingly for texts written for master's programs as prospective students are generally aware of this.)*

*A current overview of all modules is available in TU Berlin's module transfer system (MTS). The MTS also provides an overview of which modules are mandatory for your degree program and which are elective. Detailed module descriptions provide information about the contents of modules, learning objectives, participation requirements, workload, types of assessment, etc. The module catalogue is based on the study and examination regulations. The most current version of the regulations applies to applicants.*

It is best to also briefly mention the modules here to offer prospective students some insight, instead of only referencing the MTS (briefly address compulsory modules, primary topics of the program).

### Internship

*As part of the program, you must complete a professional/prevocational internship lasting at least X months. You must have completed the internship no later than XXX/by the time you register for your final exam. Generally this is before you register your master's thesis. XX credit points are awarded for the professional internship.*

*Further information is available in the [program's internship guidelines](#).*

*Or: An internship is not required in this degree program.*

### Stay abroad

*You can generally complete parts of the program abroad, either in the form of study abroad or internships. General information concerning stays abroad is available from the [TU Berlin Department of International Affairs](#) (study abroad) or the [Career Service](#) (internships abroad).*

*Or list existing cooperations, compulsory stays abroad, or mobility windows, so that it is clear whether or not a stay abroad is a compulsory component. If this is not applicable, leave the text as is. Both links and the linked pages are then mandatory.*

### Acquired skills

*In the XXX master's/bachelor's degree program, you will gain a thorough understanding of XXX. As a graduate, you are able to/you know how to XXX. You are familiar with XXX. You are also able to XXX. Besides expert knowledge and skills in your subject, you will gain soft skills that enable you to work in a scientifically responsible way, to develop approaches to work and solutions that are critical and reflective, and to work in interdisciplinary and transdisciplinary teams.*

*Please note: Do not copy the StuPo text word for word. Write an appealing text for prospective students (StuPo language should be avoided).*

### After your studies

*As a graduate you will typically be able to work in/for XXX...*

*Alternatively you can mention the option of an academic career if the degree program is research-oriented (research fields, doctoral studies, options in research and teaching).*
