Study and Examination Regulations

AMBI.

15/2014

Please note that this is an **unofficial translation** of the Study and Examination Regulations for the Master's Program in Business Mathematics from 2 July 2014 (AMBI. TU 11/2014, p. 142ff)

In case of inconsistency between the German and the English version the German version of the agreement prevails.

Study and Examination Regulations for the Master's Program in Business Mathematics at Faculty II – Mathematics and Natural Sciences – of Technische Universität Berlin

of 2 July 2014

On 2 July 2014, the Faculty Board of Faculty II – Mathematics and Natural Sciences – of Technische Universität Berlin adopted the following Study and Examination Regulations for the Master's Program in Business Mathematics, in accordance with Section 18 (1) no. 1 of the Constitution of Technische Universität Berlin and Section 71 (1) no. 1 of the Berlin State Higher Education Act (*Berliner Hochschulgesetz – BerlHG*), in the version of 26 July 2011 (Berlin Gazette of Laws and Ordinances [*GVBl.*], page 378).^{*}

Contents

I. General regulations

Section 1 – Scope of application

Section 2 – Entry into force, expiry

II. Objectives and organization of studies

Section 3 – Learning outcomes, program content, and professional fields

Section 4 – Program start, standard period of study, and required coursework

Section 4a – Admission requirements

Section 5 – Program structure

Section 5a – Internship

III. Requirements and conduct of examinations

Section 6 – Purpose of the Master's examination

Section 7 – Master's degree

Section 8 – Scope of the Master's examination

Section 9 – Master's thesis

Section 10 – Calculation of the overall grade

IV. Annexes

I. General regulations

Section 1 – Scope of application

These Study and Examination Regulations govern both the objectives and organization of studies, and the requirements and conduct of examinations in the Master's Program in Business Mathematics. The program-specific provisions included herein supplement the current version of the Regulations Governing General Study and Examination Procedures (*AllgStu-PO*) of Technische Universität Berlin with stipulations relating specifically to this study program.

Section 2 – Entry into force, expiry

(1) These Regulations shall enter into force on the day after their publication in the Official Gazette of Technische Universität Berlin (*Amtliches Mitteilungsblatt*).

(2) Students enrolled in the Master's Program in Business Mathematics at Technische Universität Berlin prior to the entry into force of these Study and Examination Regulations shall decide whether they wish to continue their studies in accordance with these Regulations or with the Study and Examination Regulations for the Master's Program in Business Mathematics of 24 January 2006 (Official Gazette of TU Berlin 26/2006). Students must give their decision in writing to the relevant office of the university administration, and have it officially recorded by the latter, when registering for the next module examination.

(3) The previously applicable Study and Examination Regulations for the Master's Program in Business Mathematics of 24 January 2006 (Official Gazette of TU Berlin 26/2006) will expire no later than the end of the eighth semester after these Study and Examination Regulations will have entered into force. Students who have not completed their studies at the time of expiry in accordance with Sentence 1 shall continue their studies in line with the present Regulations.

II. Objectives and organization of studies

Section 3 – Learning outcomes, program content, and professional fields

One of the striking features in the development of almost all fields of knowledge is the ever-increasing use of mathematical methods and ways of thinking. Mathematics has long been used in the insurance sector and in numerous other applied sciences. More recently, mathematical methods and procedures have been playing an ever greater role, particularly in the Economic and Social Sciences. This goes hand in hand with the growing efficiency of data processing, which enables the solution of increasingly complex processes.

Just as diverse as the fields of application are the potential areas of deployment for mathematicians in industry, business and administration, research institutes, institutions of higher education, and universities of applied sciences. Important fields of professional activity are to be found in areas involving economic sciences, such as operations research, organization and planning, investment banking, management consulting, insurance, logistics, and in research institutes of all kinds – and indeed for the most part in all of the aforementioned areas through the use of data processing, in which regard the computer industry itself represents a significant sphere of activity for mathematicians.

Building on the skills and knowledge acquired during a relevant Bachelor's program, the Master's Program aims to impart additional skills and knowledge that will qualify graduates to take on positions of responsibility in the professional fields listed above. An in-depth study of Mathematics and a research-related final thesis are designed to enable graduates to carry out independent scientific work, and to put them in a position to be able to classify new scientific findings critically and to apply them in a target-oriented way. In the course of their studies, students shall develop the ability to mathematize concrete problems, analyze the underlying structures, generate approaches to solutions based on methods that already exist or are in need of broadening, and deliver solutions, particularly with the aid of computers.

Business Mathematics students have many opportunities to carry out internships at suitable research institutes, industrial firms, data-processing companies or business enterprises, thereby enhancing their understanding of the professional duties of mathematicians.

Section 4 – Program start, standard period of study, and required coursework

- (1) Students may begin with the program either in the winter semester or in the summer semester.
- (2) The standard period of study, including completion of the master's thesis, is four semesters.
- (3) The required coursework in the Master's Program amounts to 120 credits.
- (4) The teaching curriculum and the entire examination procedure are structured and organized in such a way as to enable students to complete the program within the standard period of study.

Section 4a – Admission requirements

The prerequisite for admission to the master's program in Business Mathematics is a Bachelor's or equivalent university degree in the subject area of business mathematics. Admission may also be granted to persons who have obtained a Bachelor's or equivalent university degree in the subject area of Mathematics, Technomathematics or in a related study program, provided that economic knowledge amounting to at least 15 credits from modules in accordance with Annex 2 of the Study and Examination Regulations for the Bachelor's Program in Business Mathematics at Technische Universität Berlin can be proven.

The relevant examination board shall decide on whether the technical and content-related requirements have been fulfilled and whatever exceptions may apply.

Section 5 – Program structure

- (1) Students have the right to individually determine the order of progression of their own course of study. However, they are obliged to comply with the provisions of these Study and Examination Regulations. Students are recommended to follow the chronology of modules set down in the proposed course schedules in the Annex to these Regulations. This shall not apply to obligations arising from the definition of subject-specific admission requirements for modules.
- (2) The Master's Program provides for the completion of modules amounting to 90 credits in the following areas:
 - Area 1: Specialization in Mathematics,
 - Area 2: Economic Sciences,
 - Area 3: Electives,
 - Area 4: Mathematical Seminar,as well as the preparation of a Master's thesis (30 credits).
- (3) The following credits must be acquired in the individual areas:

Area 1: Specialization in Mathematics (40 credits)

This area comprises modules amounting to 40 credits that may be selected from the entire range of courses offered by the Institute of Mathematics. In this regard, the modules must be selected in such a way that at least 20 credits are earned from

advanced modules of a field of study according to Annex 1.

Area 2: Economic Sciences (28 credits)

In this area, modules amounting to 28 credits in accordance with the provisions of Annex 2 are to be completed.

Area 3: Electives (16 credits)

This area comprises modules with coursework amounting to 16 credits that may be selected from the entire range of courses offered at Technische Universität Berlin, other universities and equivalent institutions of higher education within the scope of application of the Framework Act for Higher Education (*HRG*), or from the range of courses offered at foreign universities and institutions of higher education that have been accredited as equivalent.

Area 4: Mathematical Seminar (6 credits)

One "Mathematical Seminar" module worth 6 credits is to be selected from the range of courses offered by the Institute of Mathematics. This module is not graded.

(4) Modules that were the subject of the Bachelor's examination of the student concerned, or that have a considerable overlap in content with courses from the respective other modules, may not be considered in Areas 1 to 4. In cases of doubt, the examination board shall decide.

(5) In the event that students, as part of their Bachelor's studies, have already selected several advanced modules from one of the fields of study listed in Annex 1, the examination board may authorize that in Area 1 only 10 credits from the advanced modules of one field of study need to be acquired.

(6) In the event that the range of courses offered does not allow a combination of modules with the required number of credits in Areas 1 to 3, a total of up to 5 credits may be transferred between the areas.

(7) At the beginning of the Master's Program, students are recommended to draw up an individual course schedule in accordance with the requirements of these Regulations, taking into account, in particular, the specific content-related requirements of the topic area desired for the completion of a Master's thesis.

An overview of the specific content-related requirements of individual topic areas as well as of the corresponding module combinations, in compliance with these Regulations will be published on the faculty website.

Section 5a – Internship

(1) Students may carry out an internship at a business enterprise or at a company applying mathematical procedures or the methods of computer science. Based on a certificate from the internship employer indicating the internship's schedule, content, and successful performance, the internship coordinator shall decide on whether the internship is to be recognized as an elective module (Area 3) and on its valuation as an examination worth no more than 6 credits. Prior to starting an internship, students are recommended to seek advice from the internship coordinator with regard to the internship's recognition and the number of credits that can be awarded on its completion.

(2) The Faculty Board of Faculty II shall appoint from among the persons entitled to give examinations at the Institute of Mathematics an internship coordinator responsible for making the decisions in accordance with Section 5a (3).

(3) In the event that an internship is to be considered in Area 3, the internship coordinator shall decide on the basis of a certifi-

cate issued by the internship employer whether to recognize the internship as an ungraded examination and on the number of credits to be generated on its completion. The student concerned may appeal against the internship coordinator's decision to the examination board, which will reach a final decision on the matter.

III. Requirements and conduct of examinations

Section 6 – Purpose of the Master's examination

The Master's examination determines whether a candidate has achieved the learning outcomes according to Section 3 of these Regulations.

Section 7 – Master's degree

On behalf of Faculty II, Technische Universität Berlin awards the academic degree "Master of Science" (abbreviated: M.Sc.) to students who have passed the Master's examination.

Section 8 – Scope of the Master's examination

The Master's examination consists of the module examinations pursuant to Section 5 (3) and the Master's thesis according to Section 9.

Section 9 – Master's thesis

(1) The Master's thesis is usually completed in the fourth course semester. It amounts to 30 credits and is to be produced within six months. In exceptional cases, and in response to a reasoned request, the examination board may extend the preparation period for the final thesis.

(2) To apply for admission to the Master's thesis, students must submit proof of successfully completed module examinations worth at least 18 credits from Area 2, as well as a total of 36 credits earned in Areas 1 and 3.

This shall not apply to content-related obligations arising from the topic area in which the Master's thesis is to be written. Students have no entitlement to any specific topic area.

An overview of the specific content-related requirements of individual topic areas as well as of the corresponding module combinations in compliance with these Regulations will be published on the faculty website.

In exceptional cases, and in response to a reasoned request, the examination board may approve admission to the Master's thesis without such proof being provided.

(3) The topic of the Master's thesis may be rejected once, however only within the first month of being issued by the responsible department of the university administration.

(4) The procedures for application for admission to a final thesis, and the latter's assessment, are regulated by the Regulations Governing General Study and Examination Procedures (*AllgStuPO*) of Technische Universität Berlin.

Section 10 – Calculation of the overall grade

For determining the overall grade in accordance with Section 47 (6) of the Regulations Governing General Study and Examination Procedures (*AllgStuPO*), Area 3 (Electives) and Area 4 (Mathematical Seminar) shall not be considered in the calculation of the overall grade.

IV. Annexes

Annex 1: Fields of study:

The fields of study in Area 1 in accordance with Section 5 (3) are listed in the following.

Both introductory and advanced modules are offered in the fields of study. The Faculty Board of Faculty II shall decide on the assignment of individual modules to the fields of study and their classification as advanced modules, if applicable. The assignment of individual modules to the fields of study and their classification will be published on the website of Faculty II. A module may be assigned to more than one fields of study.

Fields of study:

- 1) Numerical Mathematics
- 2) Differential Equations, Functional Analysis, Nonlinear Optimization, Modeling
- 3) Stochastics and Financial Mathematics
- 4) Geometry and Mathematical Physics
- 5) Discrete Mathematics and Algebra

Annex 2: Area 2 (Economic Sciences)

In Area 2, 28 credits from the modules listed in the overview of elective modules in Business Administration or Economics according to Annex 1 to the Study Regulations for the Master's Program in Industrial Engineering and Management at Technische Universität Berlin are to be generated.

In case of doubt as to the admissibility of the choice of modules made, and in exceptional cases, the examination board shall decide.
