Usage Hints

In this study guide a lot of information is presented in a condensed form. However, it pro-
vides numerous references to further information, which you can find on our faculty website at
www.eecs.tu-berlin.de. Simply insert the number marked with the symbol ▶ in this study guide
on our faculty website at the top right under “Quick Access” and call up the desired page. Alterna-
tively, you can access the relevant Internet pages directly via link.
Dear students!

We are pleased to welcome you to the master’s program Information Systems Management at TU Berlin. In this study guide we have compiled useful information for your studies. You will learn which study areas exist for your professional specialization and be enabled to explore your options in compulsory elective and in elective modules to shape your studies according to your individual ideas and goals.

Before we share our study tips with you, I would like to talk about the expected study situation at TU Berlin for the winter semester 2022/23: Having been able to offer courses such as seminars, tutorials or project groups with a reasonable number of participants since the last winter semester due to the pandemic development at that time, we expect to be able to continue this in the current winter semester. This means that you will only be able to take full advantage of our course offerings on site this winter semester. Thus, you will not only benefit from lively face-to-face teaching, but also from personal exchange with fellow students and lecturers, as well as from learning together in groups and from our campus life.

Nevertheless, teaching in the winter semester 2022/23 will still depend on the development of the pandemic as well as the energy supply situation and will be decided in coordination with the Berlin Senate and the other Berlin universities. Please check the central TU website for the latest developments regarding study & teaching to stay informed. There you will also find up-to-date information on office hours and advising or mentoring opportunities. Take advantage of these, seek contact with your fellow students as well as with tutors and lecturers. In this way, possible difficulties can be avoided in advance or resolved at an early stage. To ensure that we can inform you quickly and reliably in case of last-minute changes, please always be reachable via your TU Berlin e-mail address.

I wish you a stimulating and successful time at TU Berlin.

Prof. Dr. Benjamin Blankertz
Dean of Studies at Faculty IV
Electrical Engineering and Computer Science
Your Studies

Study Goals and Degree
Building on the specialized knowledge gained during the Bachelor’s degree program, the Master’s program in Information Systems Management imparts in-depth knowledge and skills with regard to the methods, approaches and current technologies in the fields of Information Systems Management, Computer Science and Economics. In addition to providing a professional qualification, the Master’s program aims to enhance the skills required for independent scientific work in the field of Information Systems Management. Prospective graduates of the Master’s program will have further expanded their specialized knowledge and will be well informed about current research topics in the field of Information Systems Management. Seminars, projects and Master’s theses will be directly integrated into the research work currently being carried out in the subject areas. Graduates will receive the academic degree of ‘Master of Science’ (M.Sc.). With this degree they can work as freelancers, assume leading positions in industry, administration and science, or enroll for doctoral studies.

Organization of the Master’s Program
Apart from the core studies, the four-semester Master’s program consists of electives and the writing of the Master’s thesis. During the first three semesters, students may choose their modules from different study areas (see an overview at 184947) and one catalog in the sub-areas of Information Systems Management, Computer Science and Economics, thus developing self-selected, thematic focal points and enhancing their individual profiles. A study area accumulates modules of different chairs under a specific focus. The core studies are arranged as follows:

Compulsory Electives
a. Studies in Information Systems Management
   Compulsory elective modules worth 24–30 CP from the study area:
   – Information Systems
b. Studies in Computer Science
   Compulsory elective modules worth 18–24 CP from one of the following study areas:
   – Distributed Systems and Networks
   – Data and Software Engineering
c. Studies in Economics and Management
   Compulsory elective modules worth 18–24 CP from the catalog:
   – Business, Economics & Management
Compulsory elective modules worth at least 12 credits must be completed and must include at least one project.

As electives you have to complete modules worth 12–18 CP with thematic focus on both technical skills and general skills. You may choose modules from all courses offered by the TU Berlin or other universities in Berlin and Brandenburg as well as from courses offered by equivalent foreign universities and institutions of higher education.

**Recommended Progress of Study**

The table below shows the progress of study as recommended in the study and examination regulations. The progress of study presented here is intended to demonstrate how you might approach your Master’s program and serves merely to provide examples and a guide.

### Study Planning

Early, continuous study planning is essential for successful study. Here it is advantageous to pay particular attention to the following: Try to take exams as early as possible and, if interested, consider the possibility of a semester abroad early on; the faculty has a variety of offers available.

Also inform yourself about specific examination modalities such as registration deadlines or the number and form of examinations to be taken as well as their requirements and, of course, about all regulations in the study and examination regulations (StuPO) of your study program (reading version page 8). Online, you can find the StuPO applicable to your studies as well as more detailed information on the General Study and Examination Regulations of TU Berlin at [www.tu.berlin/en/go1301](http://www.tu.berlin/en/go1301).

</tbody>
</table>
However, it is particularly important for good study planning to deal with your own subject interests and your choice of study areas early on and thus to consistently set study foci, after all, the master’s program serves your subject specialization. At the end of your studies, the master’s thesis is the last and, for many, probably the greatest challenge. A proven focus of study forms the basis, above all, for finding the right topic and making contact with suitable chairs.

Helpful information and tips on thesis topics can be found under 70453. We recommend that you start planning your final thesis at an early stage. In our exchanges with students, we regularly see what problems can arise, especially when things have to be done quickly and you are not prepared.

Don’t miss out: Before the start of lectures, during our Freshmen Orientation Week starting on October 6, the mentoring team organizes an exciting program (campus tours, bar evening, etc.) especially for Master’s students to help them with orientation as well as arriving at the TU Berlin.

Further mentoring offers with different focuses you can find at www.tu.berlin/en/go6564.

**Mentoring**

Studying means facing new challenges. And so is taking up a master’s degree program connected with finding one’s way around the university again and finding orientation in one’s own course of study. At the same time, you want to get to know your new fellow students and have to organize yourself in the daily routine of studying in order not to miss any deadlines or to prepare for exams in time. A first orientation for a successful Master’s program is provided by the mentoring team of Faculty IV on their website at https://mentoring.eecs.tu-berlin.de/what-is-mentoring.

**Studying Abroad**

Today’s labor market is a competitive global arena, that asks of university graduates to not only have proficient knowledge of foreign languages but also professional and intercultural experience. Thus you may consider during your Master’s program a longer stay abroad. Apart from supplying you with a significant advantage in regard to any future employment, a study stay in a foreign country proves often to be also a very unique personal experience. Student exchange programs, international internships or employment abroad give you not only the opportunity to enhance your specialized know-how, but also to broaden your personal views on differences in languages, cultures and everyday life. Acquired intercultural skills, flexibility and commitment demonstrated by your stay abroad are important assets for future employment.

To make the most out of your stay abroad, both professionally and personally, you need to prepare this time as thoroughly as possibly. Thus we recommend, you start with your preparation well in advance and make proficient use of our informative events and consultation.
There are many possibilities and a wide range of student exchange programs, amongst which Erasmus+, the German Academic Exchange Service (DAAD), Fulbright are the best-known, but not the only ones. Each semester the faculty holds different informative events, which are usually advertised online in advance. For assistance and information you may contact the TU Berlin’s Students Mobility and International Students Office ➤ 5190. They offer advisory and counseling services for your stay abroad. Furthermore, the Career Service (www.tu.berlin/en/careerservice/scholarships) provides you with information pertinent to internships in Germany and abroad.

Exchange Programs at Faculty IV

As part of the Erasmus+ exchange program, the Faculty currently cooperates with more than 40 universities in 15 European countries. The TU Berlin hosts students from participating universities and has been sending students abroad for years. Please see ➤ 96169 for the latest brochure and the exchange possibilities offered by the Faculty.

Apart from this specifically Europe-targeted program, the Faculty also engages in non-European exchange programs, currently with:

– Universidade Federal do Rio Grande do Sul (UFRGS) in Porto Alegre (Brazil). For further information consult ➤ 29680.
– Shanghai Jiao Tong University in China ➤ 150631.

Double-Degree Programs at Faculty IV

Undoubtedly, participating in a double-degree program is the highlight of any study abroad. By participating in a double-degree program you’ll have the opportunity to study at the TU Berlin and at a second university abroad. Upon successful completion of your studies, you will be awarded two academic degrees. For the benefit of both German and foreign students, the Faculty has entered into several double-degree agreements. Our current partners are in China, France, Korea and Poland ➤ 150631.

Information about all programs of the Faculty IV

Please contact the Faculty IV’s International Studies Coordinator, Wolfgang Brandenburg, when you plan and prepare a stay or double degree abroad ➤ 147520.
I. General Section

Section 1 – Scope of Application
These study and examination regulations govern both the objectives and organization of studies, and the requirements and conduct of examinations in the consecutive international Master’s program in Information Systems Management. They supplement the Regulations Governing General Study and Examination Procedures (AllgStuPO) of Technische Universität Berlin with course-specific regulations.

Section 2 – Entry Into Force/Expiry
(1) These regulations enter into force on the day after their publication and apply to students enrolling from the winter semester of 2017/18.

(2) The study and examination regulations for the Master’s program in Wirtschaftsinformatik/Information Systems Management from July 23, 2013 (Official Gazette TU [Amtliches Mitteilungsblatt der TU Berlin] 4/2014 p. 32 et seq.) will expire six semesters after the present regulations take effect. Students who have not yet completed their studies by this time will automatically be transferred to the present regulations. The responsible examination board decides on the accreditation of their previous academic performance.
(3) Students enrolled in the Master’s program Information Systems Management at Technische Universität Berlin prior to the entry into force of these study and examination regulations can either complete their studies in accordance with these Study and Examination Regulations or with those of July 23, 2013 (Official Gazette TU 4/2014 p. 32 et seq.).

The student’s decision must be documented at the responsible office in the Central University Administration within two semesters of the entry into force of the present regulations. If no decision is communicated by the student by this time, the degree will be continued in accordance with the regulations from July 23, 2013.

II. Objectives and Organization of Studies

Section 3 – Qualification Objectives, Course Contents and Professional Fields of Activity

(1) Graduates are familiar with the subject-specific methods and approaches as used in Information Systems Management as well as the sub-areas of Computer Science, Economics and Management. They are able to apply them in order to classify scientific knowledge critically and develop their own scientific contributions and ideas. Depending on the focus of the course, this can involve broadening the students’ existing knowledge and skills base or a targeted specialization. Drawing on their technical knowledge and business skills and using a systemic and analytical approach, the graduates can independently devise and implement innovations in the field of Information and Communications Technology. Graduates are able to combine knowledge from different subject areas. They are able to make scientifically grounded decisions and reflect on their potential consequences. This also includes their reacting swiftly to changing circumstances and modifying decisions accordingly. Graduates have the ability to structure complex contents and present them adequately in written and spoken form. They are able to act in a socially responsible way and work in cross-cultural settings, and they possess highly developed social and communication skills.

(2) The international Master’s program in Information Systems Management is a consecutive and strongly research-oriented study program. The master’s program brings together content from the core studies of Information Systems Management, Computer Science and Economics. On the basis of the skills obtained during the Bachelor’s degree program, and after acquiring further scientific fundamentals, specialized studies shall introduce students to current research topics. For this purpose, the Master’s program is closely interlinked with the research activities of both participating faculties – Faculty IV Electrical Engineering and Computer Science and Faculty VII Economics and Management. Generally, seminars, projects and master’s theses are integrated into current research work in the individual subject areas, so that the research methods taught can be directly applied in practice. Participation in research colloquia and seminars gives
students the opportunity to gain insights into cutting-edge research topics in Information Systems Management and to bring the results of their own work into current discussions in the field.

(3) Graduates of the Master’s program are able to take up a position in research and science (research departments in industry, universities, universities of applied sciences, universities of cooperative education or training institutions) and of attaining further scientific qualification. In addition, they are prepared for employment in diverse areas within the field of Information Technology. They will work at the interface between Business Management and Information and Communication Technology and can therefore work in virtually any sector, company, institution, authority and scientific institute that use computer-aided information technology in order to process highly complex, company-wide business processes. Graduates are able to design and develop operational information and communications systems for organizations with the aim of enabling or optimizing business processes. They are therefore particularly qualified for tasks in leadership positions.

Section 4 – Course Start, Standard Period of Study, and Required Coursework
(1) The degree can be started in the winter or summer semester.

(2) The standard period of study, including the writing of the Master’s thesis, is four semesters.

(3) The required coursework in the Master’s program amounts to 120 credits.

(4) The educational program and the entire examination procedure are designed and structured in such a way that students can complete the program within the standard period of study.

Section 5 – Organization of Studies
(1) Students have the right to lay down the progress of their own courses of study. However, they are obliged to comply with the provisions of these study and examination regulations. The chronology of modules is recommended according to the sample course schedule in Annex 2 to these regulations. This does not apply to obligations arising from the definition of subject-specific admission requirements for modules or because some modules are not offered in every semester.

(2) Students must achieve a total of 120 credits; 90 credits in modules and 30 credits in the Master’s thesis.

(3) The modules are divided into compulsory electives (72–78 credits) and electives (12–18 credits).

(4) The compulsory modules are comprised of a total worth of 72–78 credits and are divided into three fields:
a. **Information Systems Management**  
   – Study area: Information Systems

b. **Computer Science**  
   – Study area: Distributed Systems and Networks  
   – Study area: Data and Software Engineering

c. **Economics and Management**  

The following rules apply to the modules to be completed:

- In field a), students must complete modules worth a total of 24–30 credits.

- In field b), students must complete modules worth a total of 18–24 credits from one of the two study areas listed.

- In field c), students must complete modules worth a total of 18–24 credits.

The modules assigned to the different fields can be found in the list of modules.

(5) Compulsory elective modules worth at least 12 credits must be completed and must include at least one project.

(6) Students must complete elective modules worth 12–18 credits. These modules give students the opportunity to acquire additional subject-specific, general and professional skills and can be chosen from the entire range of courses offered at Technische Universität Berlin, at other universities and equivalent institutions of higher education within the scope of application of the Framework Act for Higher Education (Hochschulrahmengesetz, HRG), as well as institutions of higher education and universities abroad that have been accredited as equivalent. Students are recommended to choose modules that factor in societal, social and/or gender and diversity considerations. The electives also include foreign language courses; English language modules at level C1 and above (according to the CEFR) are credited.

(7) Students are recommended to study abroad. During their studies abroad, course work and examinations are to be completed which count toward this program. Students can apply to have work credited as long as there are no substantial differences in terms of the skills acquired. The responsible examination board decides on further details. For the period of study abroad, students are recommended to create a study plan and, before they leave, to confirm with module supervisors or the examination board that the work they plan to undertake abroad can be credited. Students can receive support in this matter from the faculty by consulting the student counseling, the international studies coordinator, module supervisors, academic coordinators or the examination board. Other rules may apply for periods of study abroad organized under agreements entered into by TU Berlin or Faculty IV. On their return to TU Berlin, students must apply to the examination board for the work they undertook at other universities to be credited.
The skills taught in the modules, the requirements for module exams and any admission requirements are updated regularly in program-specific module catalogs in accordance with Section 33, paragraph 6 of AllgStuPO. They are also published in TU Berlin’s Official Gazette (Amtliches Mitteilungsblatt) at the beginning of the winter and summer semesters.

III. Requirements and Conduct of Examinations

Section 6 – Purpose of the Master’s Examination
The master’s examination serves the purpose of assessing whether the candidate has achieved the qualification objectives according to Section 3 of these regulations.

Section 7 Master’s Degree
On the successful passing of the master’s examination, Technische Universität Berlin will award the academic degree “Master of Science (M.Sc.)” through Faculty IV Electrical Engineering and Computer Science.

Section 8 – Scope of the Master’s Examination; Determination of the Overall Grade
(1) The master’s examination comprises the module examinations for the modules completed as part of these regulations and the Master’s thesis according to Section 9.

(2) The overall grade is determined in accordance with the principles outlined in Section 47 of AllgStuPO. It is based on a) the module examinations that are graded and form part of the overall grade according to the list of modules, and b) the grade of the master’s thesis.

(3) In calculating the overall grade, the following degree components are given a zero weighting (i.e. they are not included in the final grade): a) the elective modules b) the modules completed according to Section 5, paragraph 5 worth a maximum of 12 credits.

Section 9 – Master’s Thesis
(1) The Master’s thesis is usually completed in the fourth semester. It is worth a total of 30 credits and amounts to 26 weeks’ work. If there is an important reason, and it is beyond the student’s control, the examination board can grant an extension of up to one month, and in cases of illness up to three months.

(2) To be admitted to complete a master’s thesis, students must submit evidence of having successfully completed module examinations worth at least 60 credits to the responsible office in the University’s Central Administration. In exceptional cases, the examination board can decide to admit a student who cannot yet provide evidence of attaining the required amount of credits.
(3) The topic of the Master’s thesis may be rejected by the student on one occasion, however, only within the first six weeks of being issued by the responsible office of the Central University Administration.

(4) The procedures of application for admission to a final thesis and the latter’s assessment are set down in AllgStuPO as amended.

(5) The Master’s thesis must not contain a non-disclosure statement or any other secrecy arrangement that goes beyond the standard confidentiality and due diligence obligations.

Section 10 – Types of Examination and Enrollment for Examinations
(1) The types of examination and the procedure of enrollment for module examinations are set down in AllgStuPO as amended.

(2) For compulsory elective modules studies at other faculties or universities, the types of examination specified in the relevant module descriptions apply.

Overview

To ease your first steps in our Master’s program we strived to compile a list of addresses of the most important contacts at Faculty IV and TU Berlin, including their online links.
