# BLUE FRIDAY

## MARITIME TECH TALK

**Current trends in AI and micro ROV systems. Application for the maritime industry.**

M. Sc. Michael Stein  
*Vesselity Maritime Analytics GmbH*

Underwater AI integrated with micro ROV systems is revolutionizing the maritime sector. These AI-driven mini-ROVs offer unparalleled versatility, maneuverability, and data-gathering capabilities in underwater environments. By leveraging advanced algorithms, they can autonomously navigate, inspect, and analyze underwater infrastructure, pipelines, and marine life. This synergy enhances safety, efficiency, and cost-effectiveness in tasks such as maintenance, exploration, and environmental monitoring. Ultimately, the integration of underwater AI with micro ROVs promises to streamline operations, mitigate risks, and unlock new possibilities in the maritime industry.
